

German Cockroach Preparations

Please keep in mind that proper preparation is critical for an effective treatment. Preparation includes:

- Removing EVERYTHING from cupboards, drawers, and counter tops in the kitchen (can place these items on the kitchen table).
- Clean out EVERYTHING from under the kitchen AND bathroom sinks.
- If possible, pull the stove/oven away from the wall.
- Pick up all crumbs from the counters as well as the floor.
- Wipe down countertops to remove crumbs & grease. Do NOT wipe down treated areas after the treatment has dried - This will remove the product.
- Wait for everything to dry (2 hours) before putting things back.

Please keep in mind that proper preparation is critical for an effective treatment. If the home is not properly prepared, Empire will not be able to complete the treatment, and it will need to be rescheduled. The technician is not required/expected to wait for the home to be prepped. Do NOT use over the counter treatments as this will counteract the material used by Empire Pest & Wildlife Control, and VOID the guarantee.

Please allow 4 – 6 weeks for treatment to take full effect. Nymphs will continue to hatch in the upcoming weeks. Empire Pest & Wildlife Control combats this with an Insect Growth Regulator (IGR), so the new cockroaches are unable to reproduce. If you notice any activity after 6 weeks, please contact Empire at (616) 796-8900 or via email at contact@epwcmi.com.
